

Advanced Research Grant (ARG) _COMING SOON !

The establishment of the Anusandhan National Research Foundation (ANRF) has generated immense expectations within the research community. ANRF is envisioned to play a pivotal role in fostering excellence in science and serving as a key enabler in realizing the goals of Viksit Bharat.

ANRF has already rolled out some new programs like the Mission for Advancement in High impact Areas_Electric Vehicles (MAHA_EV mission), the Partnerships for Accelerated Innovation and Research (PAIR) program in addition to some of the restructured programs of the erstwhile SERB like the Startup Research Grant (SRG) restructured to Prime Minister Early Career Research Grant (PMECRG), J C Bose Fellowship restructured to JC Bose Grant (JBC) and the Empowerment and Equity opportunities for excellence program (EMEQ) restructured to Inclusivity Research Grant (IRG). We endeavour to ensure that academics, scientists and all other stakeholders feel assured that their interests are being taken care of.

It is hereby intimated to all concerned that ANRF will soon be coming up with a restructured version of the Core Research Grant (CRG) in the form of **Advanced Research Grant (ARG)**. The ARG program will be inviting project proposals from investigators to support research in various areas of science and engineering for a period of up to five years, with an enhanced thrust on collaborative research. As a step towards inclusive growth, the new ARG call will also focus on interdisciplinary research in the humanities and social sciences.

The call for proposals for the ‘Advanced Research Grant’ will be launched soon.

Get your proposals ready and stay tuned for updates !!
